

MOBILE SHREDDING CAPABILITIES

MOBILITY'S IMPORTANCE IN ITAD

Sensitive data is present in many industries and across strata, from large-scale data centers to small-scale server rooms. When there is an infrastructure update, the HDDs, SSDs, and other networking equipment that store proprietary information need to be properly disposed of. Smith is able to physically meet you where you need us and when you need us for all ITAD requirements.

WHAT WE DO

Smith's offerings go far beyond just sourcing. We support our global partners at every step of their processes and their supply chains, from beginning to end – including providing options for dynamic IT asset disposition that meet their custom needs.

Smith's Intelligent Distribution™ meets Intelligent ITAD™. Our IT asset disposition program and resources offer better ROI alongside the peace of mind of knowing that retired assets are being dispositioned responsibly. Our shredding, degaussing, and disposition services can help your business achieve a circular economy and eliminate e-waste.

WHAT IS MOBILE SHREDDING?

Mobile shredding solutions offer the same quality services as shipping equipment directly to your ITAD partner's warehouse. Rather than shipping sensitive equipment and data, mobile ITAD units provide shredding, degaussing, and proper disposal services directly on-site at a customer's facility. Often running on generators, mobile ITAD service trucks are an extension of a partner's full proficiency.

HOW WE CAN HELP

Smith has two mobile ITAD service trucks fully equipped to meet customers' requirements. Our trucks can shred up to 1,350 HDDs or 1,800 SSDs per hour. If customers require their devices to be shredded at larger widths, we can shred even higher quantities of drives per hour. In addition to shredding, our trucks can degauss up to 3,600 drives per hour. The machines used in Smith's mobile ITAD service trucks are in line with CE and ANSI safety standards and enable Smith to offer fully customizable ITAD solutions on-site at your facility.

ADVANTAGES OF MOBILE SHREDDING

Sensitive IT equipment needs to be handled with care, so Smith offers mobile ITAD solutions that help customers achieve proper disposal, full security, and the highest returns on their investments.

Quick, Flexible Solutions

- **Save Time:** Accessibility and complete ease of mobile ITAD services allow customers to keep their businesses running without any delays or disruptions.
- **Convenience:** ITAD services where you need them, when you need them.

Eliminate Chain-of-Custody Issues

- **Omit Security Concerns:** ITAD service trucks become a part of the customer's building, resolving any potential transportation or safety concerns.
- **Full Transparency:** On-site ITAD services show full transparency throughout the entire lifecycle process of disposal.

Value-Added Support

- **Decommissioning:** Besides witnessing their drives being wiped, shredded, or degaussed, customers can also have their retired IT equipment, such as servers or switches, removed.
- **Remarketing Services:** In order to achieve the highest return on investment, mobile ITAD trucks can transport a customer's retired equipment back to their warehouse and test the devices to determine if recycling or reselling is the best option.

WHO WE SUPPORT

No matter what industry you're in, Smith can help optimize your business and support your goals. From data centers to server rooms and beyond, we can engineer solutions to manage the equipment you need to retire in compliance with all regulatory guidelines.

Customers with the most sensitive and proprietary data, such as those in the government, military, or aerospace and defense industries, can especially benefit from Smith's on-site ITAD services. Our Hammermill shredders are completely portable machines that can shred within DoD specifications.
